

# The ReliaSpeak TWS Encryption Earbuds

Simple, affordable E2EE solution.

When encryption mode is activated, the remote party must use ReliaSpeak earbuds to decode your voice. Audio intercepted via line monitoring or captured by the device will be completely unintelligible.

## Advanced Voice Encryption Technology

Integrates both digital voice encryption and analog voice encryption algorithms, which can switch automatically according to call mode and line quality, providing users with an optimal security experience.

Digital voice encryption adopts ECDH256 and AES256 cryptographic algorithms, supporting real-time negotiation and generation of voice encryption keys to ensure a unique key for each call.

Analog voice encryption offers more than 100,000 discrete keys for users to choose freely. If the two parties use different keys, they will not be able to hear each other's voice clearly.

## Support Various Communication Methods

The encrypted call function supports 2G/3G/VoLTE cellular voice calls and various real-time voice applications such as WeChat, WhatsApp, Line, and Telegram. It also supports three-party calls, online conferences, and voice messages.

	Digital Voice Encryption	Analog Voice Encryption
Security Level	Highly secure	Secure
Recommended Phone Models	iPhone, Huawei Mate series, Samsung Note series	All major smartphones
Recommended Call Mode	VoLTE, FaceTime, WhatsApp, Telegram	2G/3G/VoLTE and All major real-time voice calls e.g. WeChat, WhatsApp, Telegram...
Online-meeting /three-party calls	Not supported	support

## Comprehensive Protection of Call Privacy

It effectively safeguards against various privacy disclosure risks, including pseudo base station interception, operator backdoor monitoring, voice recognition, voiceprint recognition, mobile app eavesdropping, Trojans and backdoors, as well as malicious recording of call content.

## Autonomous and Controllable Security Solutions

Decentralized security solution. No registration or app installation required. End-to-end encryption, with security fully under your control.

## Widely Applicable to Various Fields

Whether you serve government, judicial, financial or other industry clients, or general business customers, you can use ReliaSpeak earbuds to protect your call privacy during daily telephone communications and online conference calls.

## Classic Appearance for Convenient Operation

Featuring a mainstream TWS design, this device supports all standard Bluetooth headset functions. Encrypted calls require no setup and can be activated with a simple touch on the earbuds.

Note: Both parties need to use The Stealth Encrypt earbuds when making a private call.
